

Task: Configuring and Maintaining Antivirus SoftwareObjective:

Instructions:

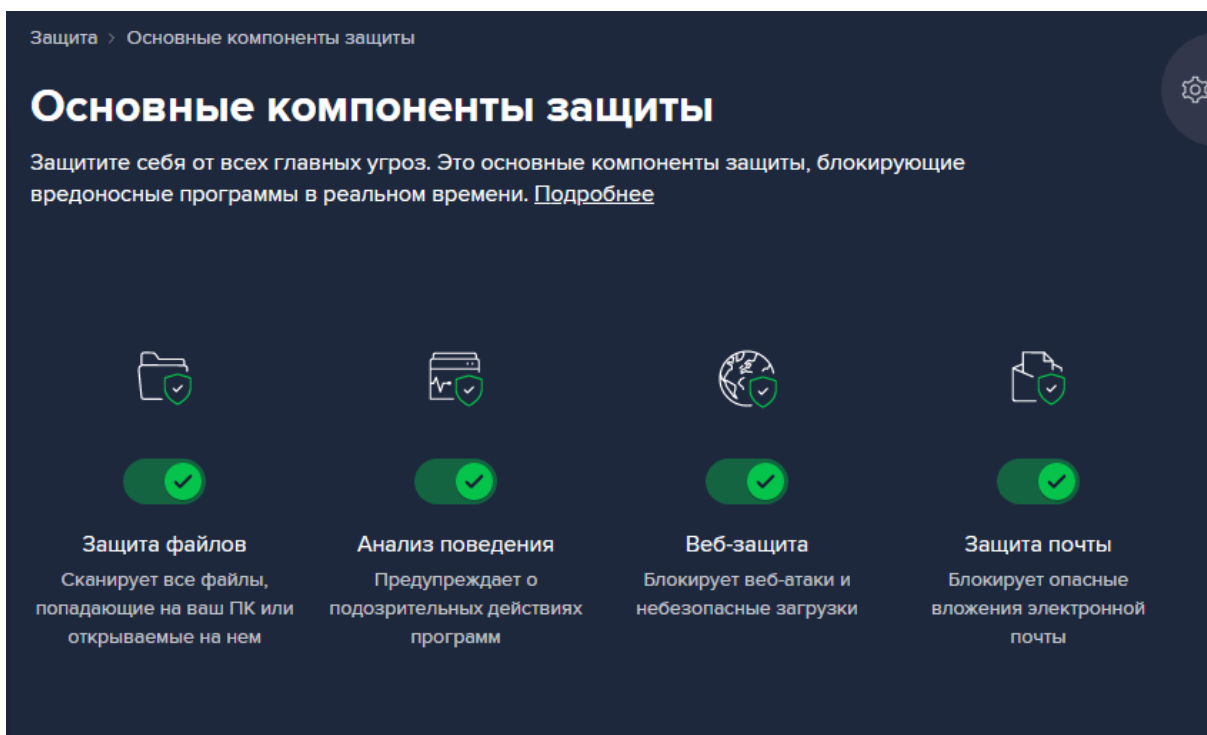

1. Verifying Installed Antivirus Software:

- Check if antivirus software is installed and running correctly (e.g., Windows Defender, Avast, etc.).
- Open the antivirus application and verify its version and status (e.g., enabled, disabled, outdated).
- **Record:** The name and version of the installed antivirus software.

```
PS C:\Users\ThinkStation75> GET-MPComputerStatus | Select AMPProductVersion  
  
AMPProductVersion  
-----  
4.18.25010.11
```

2. Configuring Security Settings and Scan Schedules:

- Open the antivirus application and perform the following configurations:
 - **Security Settings:**
 - Ensure real-time protection is enabled (if available).

- Configure notifications for detected threats.

 **Умный режим**

Выдает предупреждения при обнаружении вредоносных атак и предлагает укрепить безопасность, защитить конфиденциальность и повысить производительность компьютера — все для повышения удобства использования цифровых технологий.

- **Scan Schedules:**
 - Set up scheduled scans for critical areas (e.g., system drive, important folders).
 - Ensure scheduled scans are configured to run even when the computer is offline.
